AK 220-30 Synthetic Topcoat Industry satin matt

Technical data sheet

Intended use

Synthetic paint for low-priced high-build coatings of container, shelves, steel parts and machines. For interior and exterior use.

Processing instructions

	Mixing ratio hardener 	by weight (lacquer : hardener) 	by volume (lacquer : hardener)
7	Hardener

AK 220-30 Synthetic Topcoat Industry satin matt Technical data sheet

	Professional Coating Systems
Properties:	electrostatic application possible highly resistant to UV and weathering resistant to petrol and diesel if exposed temporarily short-term heat exposure 150 °C permanent heat exposure 130 °C
Theoretical spreading rate :	~ 45,0 m²/kg for 10 μm dry film thickness ~ 54,1 m²/l for 10 μm dry film thickness
Storage:	For at least 3 years in the unopened original container. Optimum storage conditions between +5 °C and + 25 °C, avoid direct sunlight. Other storage conditions may lead to undesirable properties of the material.
VOC:	< 406 g/l.
Processing conditions:	From + 10 °C and up to 80 % relative humidity. Ensure adequate air ventilation.
Substrate preparation:	Remove oil, grease, rust, mill scale, rolling skins, as well as other substances impairing the function of the coating!
	Attention: A direct adhesion cannot be taken as granted due to most different kinds of metals, alloys, metallic and conversion coatings and so on. The adhesion must therefore be tested on the original metal substrate.
	steel: - blast to cleaning degree Sa 2½, remove blast residues and overcoat promptly - de-rust with hand and power tools to degree of cleanliness St 3 - degrease with Mipa WBS Reiniger or Mipa Silikonentferner
Proposed coating structure:	steel: priming coat: *AK 100-20 / AK 105-20 with 50 - 60 µm dry film thickness finishing coat: AK 220-30 with 50 - 60 µm dry film thickness
Special notes:	*Further Mipa primers are available. Please contact your technical adviser or our application technicians.
	For professional use only.
	The details of the paragraphs - Proposed coating structure, Characteristics, Theoretical spreading rate, VOC - refer to the colour shade RAL 7035. For other colour shades, these may deviate.
	Applying too thick layers may extend considerably the drying time.
	Depending on the colour, the delivery viscosity may vary. Adjust the viscosity by adding thinner.
	Check colour before use.
Cleaning of tools:	Clean tools immediately after use with Mipa Nitroverdünnung.
