PU 266-50 2K PU HS Single-layer Coat semi gloss

Technical data sheet

Version: en 2/0224

Intended use

High solid 2K high-build polyurethane acrylic coating with active corrosion protection in HS quality with high vertical stability up to 250 µm dry film thickness. Suitable for industrial, high-build and top-quality coatings of machines, construction components, constructions and construction machinery. For interior and exterior use. Direct adhesion on steel and zinced substrates.

This product complies with the requirements for fire behaviour of materials and components according to EN 45545-2:2013 + A1:2015.

Proposed coating structure:	single coat system steel, zinced substrates: PU 266-50 with 80 - 150 μm dry film thickness
	2-coat system steel, zinced substrates: priming coat: **EP 100-20 with 50 - 70 μm dry film thickness finishing coat: PU 266-50 with 80 - 150 μm dry film thickness
	aluminium: priming coat: **EP 100-20 with 25 - 30 μm dry film thickness finishing coat: PU 266-50 with 80 - 150 μm dry film thickness
	3-coat system steel, zinced substrates: priming coat: **EP 100-20 with 50 - 70 μm dry film thickness intermediate coat: EP 564-20 with 80 - 150 μm dry film thickness finishing coat: PU 266-50 with 80 - 150 μm dry film thickness
Special notes:	This product contains the following maximum VOC-values: - Applied by spraying with hardener PU 916-XX: < 440 g/l of VOC. - Applied by spraying with hardener PU 914-XX: < 460 g/l of VOC.
	**Further Mipa primers are available. Please contact your technical adviser or our application technicians.
	For professional use only.
	The details of the paragraphs - Proposed coating structure, Characteristics, Theoretical spreading rate, VOC - refer to the colour shade RAL 7035. For other colour shades, these may deviate.
	Especially UV-resistant pigmentations (e.g. pastel shades for facades) are available on demand.
	Check colour shade prior to application.
	In case of application by means of an Airmix/Airless device, it is recommended testing beforehand the equipment for its suitability. If micro foam or blistering emerge during the application with an Airmix/Airless device, it is recommended adding more thinner or using the additives 2K-Systemzusatz PUA and PUS. Furthermore, the film thickness should be kept as low as possible.
	If required we also offer hardeners and cleaning agents that are suitable for 2-component mixing and dosing units. Please contact your technical adviser or our application technicians.
	Depending on the hardener in use and on the processing condition, the gloss level may prove to be higher or lower. The mentioned data refer to the hardener of series: PU 914-XX.
Cleaning of tools:	Clean tools immediately after use with Mipa Nitroverdünnung.
