# Mipa Bumper-Paint-Spray

Item no 21221 + colour no **Technical data sheet** 

page 1/2

#### Intended use

Mipa Bumper-Paint-Spray is a high-quality, fast drying textured coating for painting textured plastic parts whose original texture needs to be restored due to repair or sanding work. Moreover, smooth plastic surfaces can be transformed into surfaces with a textured look by applying Mipa Bumper Paint Spray. Particularly suitable for use on typical plastic surfaces such as bumpers, exterior mirrors, spoilers, etc. or as an effect spray.

## **Processing instructions**

#### Substrates

Plastics commonly used in the automotive industry such as ABS, ABS-PC, PP-EPDM, PUR-RIM, PUR, rigid PVC

# Pre-treatment / cleansing

Please refer to the section "Substrate preparation" for detailed information.

#### Characteristics

Excellent adhesion Fast drying Overcoatable with Mipa 1K-Acryllacken Ensures an even textured surface Highly flexible Very good hiding power Abrasion resistant and not chalking

Colour / gloss level

Black (0001), grey (0002) / satin gloss

# Preparation

Before use, shake can vigorously for 1 - 2 min!

#### Application

Spray to test - spray distance approx. 20 - 30 cm 2 - 3 coats, dry film thickness: 40 - 50  $\mu$ m

#### Flash-off time

3 - 5 min between coats

### After use

After use, turn can upside down and spray until the valve is clean, this prevents the valve from clogging up.

# Mipa Bumper-Paint-Spray

Drying time at 20 °C Dust dry after approx. 10 min Set to touch after approx. 1 - 2 h Ready for assembly after 12 h approx. **Processing conditions** From +10 °C and up to 80 % relative air humidity. Ensure adequate air ventilation. Storage Can be stored for 2 years in cool and dry places. EU limit value for this product (cat. B/e): 840 g/l **VOC-regulation** This product contains max. 700 g/l of VOC. Safety information See safety data sheet

## Substrate preparation:

### Plastic substrates:

- 1. Before painting, reheat the object to be painted for 60 minutes at 60°C.
- 2. Degrease with Mipa Kunststoffreiniger antistatisch or Mipa Silikonentferner.
- 3. Sand thoroughly with MP Softpad Superfine using Mipa Kunststoffreiniger antistatisch or Mipa Silikonentferner .
- 4. Clean again with Mipa Kunststoffreiniger antistatisch or Mipa Silikonentferner.
- 5. Allow parts to dry completely.
- 6. Recommended for neutralising electrostatic charges:

Blow off the surfaces by means of MP Ionisierungspistole X-ION that cleans and neutralises in one operation, which reduces dust inclusions when coating. In addition, this avoids differences in pigment orientation when overcoating with metallic/ effect basecoats.

ATTENTION: Releasing agents must be removed completely!

After the previously mentioned preparation, we recommend doing a wetting test with water. If the water drops roll off quickly, repeat the pre-treatment.

Due to the wide range of plastic types and compounds available on the market, preliminary tests on original parts are indispensable.
